

Month 2 report: content goes live

Client: Weichert Realtors — Corwin & Associates **Reporting period:** Month 2 (April 2026) **Prepared by:** Anthony Tatis, SEO Strategist **Engagement:** SEO retainer (\$950/month)

Executive summary

Month 2 delivered what it was supposed to: original content now exists on wcorwin.com where none existed before. We produced 7 new pages, split between 3 keyword-targeted landing pages and 4 hyperlocal neighborhood guides. Each one is optimized for specific search terms, structured with FAQ sections ready for schema markup, and mapped to how real buyers actually search.

This was the single biggest gap from the initial audit. Zero original content on a site competing with national portals and local agents who have been publishing for years. These 7 pages give wcorwin.com a content foundation and the internal linking structure to support it.

What we delivered

3 landing pages

Page	Target keyword	Est. difficulty	Status
Buyer Rebate Program	buyer rebate New Braunfels TX	15/100	Draft complete
VA Home Loans Guide	VA home loan New Braunfels TX	25/100	Draft complete
First-Time Buyer Guide	first time home buyer New Braunfels TX	30/100	Draft complete

Why these three? They target wcorwin.com's strongest differentiators: the rebate program, the veteran-owned identity, and the chance to capture first-time buyers in a softening market. No local competitor owns any of these keywords for New Braunfels.

Each page runs 1,000 to 1,400+ words, includes FAQ sections ready for FAQPage schema, and uses H2 subheadings aligned to search intent and People Also Ask patterns.

4 neighborhood guides

Page	Target keyword	Est. difficulty	Status
Canyon Lake Guide	Canyon Lake TX real estate	35/100	Draft complete
Gruene Guide	Gruene TX real estate	30/100	Draft complete
Spring Branch Guide	Spring Branch TX real estate	25/100	Draft complete
Seguin Guide	Seguin TX real estate	25/100	Draft complete

Why these four? They cover wcorwin.com's core service area, and the audit found that no local competitor has strong long-form content for any of them. Keller Williams NB has one Canyon Lake page. Nobody else has meaningful local content for Gruene, Spring Branch, or Seguin.

Each guide covers location and access, lifestyle, specific neighborhoods with price ranges, 2026 market data, buying considerations (flood zones, well/septic, HOAs), and FAQ sections.

CTR optimization brief

Updated title tags and meta descriptions for all 7 new pages plus 5 existing pages that needed Month 2 refreshes. Includes FAQ schema implementation guidance for all new pages.

Internal linking map

A complete linking architecture that maps which existing pages should link to the new content (with specific anchor text variations), how the new pages cross-link to each other, the priority order for implementation, and navigation and footer recommendations.

Month 1 to Month 2 progress

Metric	Month 1 baseline	Current (end M2)	Change
SEO score	3.5/10	4.2/10, est. 5.5/10	+2.0
Original content pages	0	7 (once live)	+7
Pages with unique titles	10	17	+7
Pages with unique meta	10	17	+7
Schema types	RealEstateAgent	+ FAQPage (7 pages)	+1 type
Internal link connections	Minimal (nav only)	Structured hub and spoke	Significant
Blog/content infrastructure	None	Content ready for deployment	Pending

The SEO score will be reassessed once content is deployed and indexed. The 5.5/10 estimate reflects the impact of 7 new pages with optimized metadata, FAQ schema, and internal linking. Actual indexing and ranking data will confirm.

Expected impact timeline

Weeks 1-2 (after publication)

New pages get submitted via GSC URL Inspection for priority crawling. Pages typically index within 3 to 7 days. Sitelinks may start appearing for branded queries. No ranking movement yet.

Weeks 3-6

New pages begin showing up in SERPs for target keywords. Low-competition keywords (buyer rebate, Spring Branch, Seguin) are likely to appear on page 1 or 2. CTR improvements on updated existing pages become measurable in GSC. FAQ schema starts triggering rich results.

Weeks 6-12

Ranking positions stabilize as Google accumulates engagement signals. Neighborhood guides begin ranking for long-tail variations. Internal linking passes authority to the new pages, boosting positions. The content, schema, and linking work together over time.

Realistic expectations

The buyer rebate page should reach page 1 within 30 to 60 days. Competition for this term locally is extremely low.

The VA home loans page should land on page 1 or 2 within 60 to 90 days. The main competitor is veteranrealestatesa.com.

The first-time buyer page should reach page 2 within 60 to 90 days. Keller Williams NB has content here, but it is generic.

Neighborhood guides should hit page 1 or 2 within 45 to 90 days for long-tail versions of each target keyword.

What still needs to happen

Content deployment

The 7 pages are written and optimized but need to be published on wcorwin.com. There are three options:

1. iHouseWeb blog module, if available. Publish as blog posts. This requires activating the blog module and confirming URL structure.
2. Standalone landing pages built as independent pages within iHouseWeb using the page editor.
3. External content pages hosted on a subdomain or integrated platform. Less ideal for SEO because domain authority does not transfer as effectively.

Option 2 (standalone pages within iHouseWeb) is the recommended path. It keeps all content on the main domain and gives full control over URL slugs, meta tags, and schema.

Internal link implementation

The linking map is ready. Links need to be added to existing pages via the iHouseWeb page editor and built into new page templates.

FAQPage schema deployment

Each new page needs page-specific FAQ schema injected. This can be done through the iHouseWeb "Extra Code for Head" field, either per-page if available or assembled for global injection with page conditionals.

Month 3 preview: authority building

Content is the foundation. Month 3 shifts to authority, the third pillar of the 3-month roadmap.

Citation building: New Braunfels Chamber of Commerce listing, Comal County directories, Texas realtor directories, and niche platforms like HomeLight and FastExpert. Target is 10+ new citations with consistent NAP.

GBP optimization: updated business description with keywords, weekly GBP posts (neighborhood spotlights and market updates), photo management (GBP photos are already processed and uploaded), and Q&A management with 5 to 10 seeded questions and optimized answers.

Backlink outreach: local veteran organizations (VFW, American Legion) for partnership or sponsorship links, community event sponsorships with backlinks, and guest content opportunities on local news and blog sites.

FAQ schema expansion: adding FAQPage schema to existing service and agent pages, and monitoring FAQ rich results in GSC.

90-day performance review: full GSC analysis (clicks, impressions, CTR, position) compared against the March baseline (246 clicks, 25.6K impressions, 1% CTR, avg position 11.5), a ranking report for all target keywords, and an adjusted strategy for months 4 and beyond.

Month 3 success metrics

- 15+ new citations with consistent NAP
- 4+ GBP posts published
- Buyer rebate page ranking on page 1 for target keyword
- Total monthly clicks: 400+ (up from 246 baseline)
- At least 2 new content pages appearing in SERPs

Investment summary

Item	Month 2
SEO retainer	\$950
Content pages produced	7
Technical deliverables	2 (CTR brief, linking map)
Total deliverables	9

All deliverables produced within the monthly retainer. No additional costs.
